SUMMARY

Frontend developer with 4+ years of experience and deep specialization in the TypeScript ecosystem. I build performant interfaces for high-load products with audiences of 500K+ (the Telegram game Hamster Kombat 2) and for real-time applications. As the key frontend developer on a real-time multiplayer game (Mafia), I took the client from prototype to MVP and closed beta — from the React 19 architecture to a resilient WebSocket layer — working closely with backend, design and QA. Core strengths: real-time state synchronization, type-safe API integration, and UX optimization for mobile webviews and Telegram Mini Apps. Available for remote work and open to relocation (Georgia).

HIGHLIGHTS

- ▶ **High-load in production.** Shipped the frontend of a Telegram game with an audience of 500K+ under heavy load (Hamster Kombat 2).
- ▶ **Real-time architecture.** Designed a WebSocket layer with auto-reconnect, ticket authentication, and cross-player state synchronization.
- ▶ **End-to-end ownership.** As the key frontend developer, delivered the Mafia game client to MVP — ~70 components, a game state machine, role-based flows — in close collaboration with backend, design and QA.
- ▶ **Type safety.** End-to-end typing via an API client generated from the OpenAPI schema (Orval) on top of a Go backend.
- ▶ **Product mindset.** Localization into 5 languages, accessibility, and smooth UX on mobile devices.

TECHNICAL SKILLS

Languages	TypeScript, JavaScript (ES6+)
Frameworks / Libs	React 19, Next.js, Vue 3, Nuxt 3
State management	Zustand, Redux Toolkit, Pinia
Real-time / Network	WebSocket, REST, Axios, Orval (OpenAPI codegen)
Markup / Styling	HTML5, Pug, CSS3, SCSS / Sass, CSS Modules, Stylus, Tailwind CSS
Platforms	Telegram Mini Apps (TMA), responsive design, mobile webview, haptics
Tooling	Vite, Webpack, Git, Biome / ESLint, i18next, Figma, Node.js, Linux

EXPERIENCE

mafiagamelive.com — Frontend Developer

Feb 2026 — Present

Part-time, project-based · real-time multiplayer online game

- Key frontend developer on a real-time social-deduction game (Mafia) — took the client from prototype to MVP and closed beta, in close collaboration with backend, design and product.
- Designed the client architecture on React 19 + TypeScript + Vite + Zustand (~70 components, modular SCSS).
- Built a resilient WebSocket layer: ticket authentication, auto-reconnect with backoff, reconnect-to-room, and real-time synchronization of lobby and in-game state across players.
- Implemented a complex game state machine (day / voting / collective & individual night / finale) with role-based flows (mafia, godfather, doctor, sheriff, maniac, etc.).
- Set up end-to-end type-safe integration by generating the API client from the Go backend's OpenAPI schema via Orval.
- Telegram Mini App integration: Telegram and guest auth, haptic feedback, back button, mobile-webview optimization.
- Localization into 5 languages (i18next), a sound/music/SFX system, a profile upgrade tree; landing page with animations and parallax.

Stack: React 19, TypeScript, Zustand, SCSS Modules, WebSocket, i18next, Vite, Orval, Biome.

Ducky (playducky.com) | ex Nerve Games — Frontend Developer

Nov 2024 — Nov 2025

- Built **Hamster Kombat 2** — the client of a Telegram game with an audience of 500K+ — as part of the core product team.
- Started at Nerve Games and moved with the team to publisher Ducky LTD following the strategic acquisition of the product.
- Implemented key game screens, mechanics, and Telegram Mini App logic with a focus on stability and performance under heavy load.
- Responsive layout of complex game interfaces for mobile webviews; cross-functional work with backend, design, and QA.

Stack: Nuxt 3, Vue 3, TypeScript, Pug, Stylus.

WebLab — Frontend Developer

Jan 2024 — Oct 2024

- Developed web applications with React + TypeScript; integrated REST APIs and managed application state.
- Contributed to the frontend revamp of the **PassimPay** payment platform — secure UI components and complex financial interfaces.

Stack: React, TypeScript, REST API.

Freelance — Frontend Developer

Nov 2021 — Dec 2023

- Developed the frontend of web applications with React and Svelte.
- Built pet projects and a personal portfolio to master modern web standards.

ADDITIONAL

- **Availability:** remote, open to relocation (Georgia).
- **English:** A2 — technical documentation and written communication.
- **Strengths:** ownership, attention to detail, fast learner.
- **Interests:** music, books, comics.
